Mere Creation; Science, Faith & Intelligent Design

Synopsis

For over a century, the scientific establishment has ignored challenges to the theory of evolution. But in the last decade such complacency about its scientific and philosophical foundations has been shaken. As cracks in the Darwinian edifice have begun to appear, many are asking whether a defensible alternative exists. In response to this growing crisis, a movement has emerged among scholars exploring the possibility of intelligent design as an explanatory theory in scientific descriptions of the universe. As Michael Behe has proposed in his landmark *Darwin's Black Box*, at the cellular level there appears to be a high level of irreducible complexity that suggests design. In this book Behe is joined by eighteen other expert academics trained in mathematics, mechanical engineering, philosophy, physical anthropology, physics, astrophysics, biology, ecology and evolutionary biology to investigate the prospects for this emerging school of thought. Challenging the reigning ideology of materialistic naturalism on both scientific and philosophical grounds, these scholars press the case for a radical rethinking of established evolutionary assumptions.

Mere Creation (MC) is an advanced-level volume that should only be approached by serious readers who have previously been introduced to Intelligent Design (ID); one should at least read _Darwin's Black Box_ (DBB) before tackling MC. I think that the best way to explain what this book is about is to explain what it is not about, and I therefore think it is necessary to first correct misrepresentations created by some other reviewers. (So read the other reviews first to make more

sense of mine.)Most of the contributors are Old Earth (OE) or Progressive creationists, but none of the contributors are deists (i.e., they don't reject the notion that God might break the laws governing the universe). This does not mean that it is assumed in the book that evolution and intelligent design are mutually exclusive concepts. Ratzsch's contribution, "Design, Chance & Theistic Evolution," is a study of whether chance could be a method of design. He concludes, "Theistic evolutionists can even take specific features of the cosmos, of organisms, as empirical evidence of design - design built into the founding of the cosmos" (p.309). This does not mean that any of the contributors (not even Ratzsch) believe in theistic evolution. Rather, he concludes, "although the gap between design theory and theistic evolution is thus not as broad as generally believed, ... design theory has available to it resources beyond the reach of theistic evolution" (p.309) (i.e., ID involves arguments of postcreation design and intervention).At first glance, one might come away with the impression that ID is essentially the same as the OE view.
